

# A call to EU legislators: protect rights and reject the call to delete transparency safeguard in AI Act

Dear Members of the European Parliament,  
Dear Representatives of Member States of the European Union,  
Dear Executive Vice-President Virkkunen,  
Dear Commissioner McGrath,

We, the undersigned organisations and individuals, **urge you in the strongest possible terms to reject the deletion of the Article 49(2) transparency safeguard for high-risk AI systems** that is proposed in the [AI Omnibus](#). This transparency safeguard ensures that providers of AI systems cannot circumvent the core obligations of the [AI Act](#). Removing it will have **no substantial positive impact, will lead to complication rather than simplification**, and will drastically **undermine the enforceability** of the AI Act, **undermine the functioning of the Single Market**, and **create unacceptable risks** for health, safety, and fundamental rights.

We therefore urge you to **reject paragraphs 6, 14, and 32 of the AI Omnibus**, thereby restoring the Article 49(2) transparency safeguard.

The Article 49(2) transparency safeguard has an essential function and removing it, as proposed in the Commission's AI Omnibus, will **create a gaping loophole and undermine the core functioning of the AI Act.**

Under Article 6(3), providers of AI systems which match the list of high-risk use cases in Annex III may decide that their system does not in fact pose a significant risk and **unilaterally exempt themselves from all obligations for high-risk AI systems.**

To stop the abuse of this derogation mechanism, providers who do exempt themselves are required by the Article 49(2) transparency safeguard to **register their derogation in a publicly viewable database**. Removing this transparency safeguard would have three key negative consequences:

1. Market surveillance authorities will have **no overview of how many companies exempt themselves from the high-risk requirements**, and we have **no way of tracking discrepancies** across member states (e.g. that in Country A there were 3000 exemptions

but only 6 in Country B), leading to potential lack of harmonisation across the Single Market.

2. Providers are given a completely opaque and unaccountable way to opt out of the obligations for high-risk AI systems, **creating a perverse incentive to sidestep the requirements of the *AI Act***. Importantly, this perverse incentive will **work to the detriment of responsible providers** who truly wish to develop responsible, trustworthy systems in the high-risk categories, allowing them to be undercut in the market.
3. The public, including civil society organisations, will have no way of knowing which providers have exempted themselves from obligations, despite the fact that their systems fall under the high-risk categories in Annex III. This removes a key element of transparency, undermines public trust, and deprives those affected by AI systems of necessary information to challenge an exemption.

Given the serious negative consequences of removing the Article 49(2) transparency safeguard, it should be expected that the Commission has a strong argument for the positive impact of its removal. By contrast, according to the Commission's [Staff Working Document](#) accompanying the AI Omnibus, the Commission asserts that removing this registration obligation would save, on average, 100 EUR: "The obligation to register AI systems in the EU high-risk database involves inputting into the online database some **information which is readily available to the provider of an AI system**. No more than **2.5 working hours should be required on average [...]**[h]ence, the costs would be EUR 100 per company."

Saving 100 EUR per company is severely disproportionate to the detrimental impact caused by removing the Article 49(2) transparency safeguard and is not in line with the Commission's claim that the 'targeted simplification measures' in the AI Omnibus do "not go beyond what is necessary to achieve the objectives of simplification and burden reduction **without lowering the protection of health, safety and fundamental rights**." An extra 100 EUR in the pockets of companies will not improve the EU's competitiveness, it will only undermine the core of the AI Act and risk **turning it into a piece of optional self-regulation**.

We therefore urge you in the strongest possible terms to reject the changes proposed in paragraphs 6, 14, and 32 of the AI Omnibus and thereby restore the Article 49(2) transparency safeguard.
